

Contracts

Operation: assignEmployeeByShiftNumber(employeeUserName, branchId, shiftNumber, roleInput)

Cross Reference: Use Case- Assign an employee to a shift

Preconditions:

- There is at least one user in the system with the role “HR Manager”.
- The user who is connected to the system has been successfully authenticated using a username and password.
- There are shifts for the coming week that are not defined as vacation/closed.
- For every shift, a list of required positions is defined.
- The selected employee exists in the system.
- The selected employee has the qualifications for the requested position, meaning this position is defined for him.

Postconditions:

- The employee has been successfully assigned to the selected shift, under the position selected by the Human Resources Manager.
