

Use Case Description

Use case name	Schedule Employees to Shifts
Textual Description	The HR assigns available employees to the open shifts of a selected period. The system validates each assignment against availability and roles then publishes the schedule.
List of Actors	HR, Employee
Pre-conditions	1. The HR is authenticated and authorized to manage schedules. 2. The scheduling period and its required shifts are defined. 3. Employees, with their availability and qualifications, are registered.
Post-conditions	Employees who submitted shift requests were assigned to shifts based on their availability and the HR demands.
Main success scenario	1. Open the system and go from the main menu to the HR Manager menu. 2. Enter username. 3. Enter password. 4. Check available employees: 4.1. Enter the branch number for the shift. 4.2. Enter the shift number to check availability for. 4.3. Select the role from the displayed list. 4.4. The system displays the available employees. 5. Assign employees: 5.1. Enter the branch number for the shift. 5.2. Enter the shift number to assign to. 5.3. Select the role from the displayed list. 5.4. Enter the employee's name. 5.5. The system prints "scheduling complete successfully".
Alternatives/Extensions	1. Invalid login (no HR-permission user): the system blocks access to the HR menu and returns to the main menu. 2. Invalid login (incomplete authentication): the system blocks access and returns to the main menu. 3. Branch number does not exist: the system reports an invalid branch number and returns to the HR Manager menu. 4. Shift number out of range (0-13): the system reports an invalid shift number and returns to the HR Manager menu. 5. Shift marked as closed / day off: the system reports that the branch is closed and returns to the HR Manager menu. 6. No active shifts defined: the system reports an error and returns to the HR Manager menu. 7. Shift has no required-roles list defined: the system reports an error and returns to the HR Manager menu. 8. Shift already fully staffed: the system reports that this role already has enough employees and returns to the HR Manager menu.

	9. Role does not exist: the system reports an invalid role and returns to the HR Manager menu. 10. Role not held by the employee: the system reports that the employee does not have this role and returns to the HR Manager menu. 11. Employee name does not exist: the system reports an error and returns to the HR Manager menu. 12. Employee already assigned to the shift (in another role): the system reports that the employee is already assigned to this shift.
